  100% { opacity: 1; transform: translateX(-50%) translateY(0); }

2.9 LOADING SPINNER (Cricket Ball)

Instead of a generic spinner, use a **rotating cricket ball:**

```
.spinner-cricket-ball {
  width: 32px;
  height: 32px;
  background: url('/assets/ui/cricket-ball-icon.png') center/contain no-repeat;
  animation: spin 0.8s linear infinite;
}

@keyframes spin {
  0% { transform: rotate(0deg); }
  100% { transform: rotate(360deg); }
}
```

Used everywhere a loading state is needed: searching for opponent, loading match, fetching data.

2.10 DIVIDER LINES

```
.divider {
  width: 100%;
  height: 1px;
  background: linear-gradient(90deg, transparent, rgba(255,255,255,0.1), transparent);
  margin: 8px 0;
}

.divider-team {
  height: 2px;
  background: linear-gradient(90deg, transparent, var(--team-primary), transparent);
  opacity: 0.5;
}
```

2.11 STAT DIAMONDS (Player Cards)

```
.stat-row {
  display: flex;
  align-items: center;
  gap: 8px;
  padding: 2px 0;
}

.stat-label {
  font-family: 'Nunito', sans-serif;
  font-weight: 600;
  font-size: 12px;
  color: #94A3B8;
  width: 60px;
  text-align: right;
}

.stat-diamonds {
  display: flex;
  gap: 3px;
}

.diamond {
  width: 10px;
  height: 10px;
  transform: rotate(45deg);
  border-radius: 2px;
}

.diamond.filled {
  background: var(--team-accent);
  box-shadow: 0 0 4px rgba(var(--team-accent-rgb), 0.5);
}

.diamond.empty {
  background: #334155;
  border: 1px solid #475569;
}

.stat-value {
  font-family: 'Rubik', sans-serif;
  font-weight: 700;
  font-size: 13px;
  color: white;
  width: 24px;
  text-align: right;
}
```

Each player has 6 stat rows: Power, Technique, Pace/Spin, Accuracy, Agility, Clutch **5 diamonds per stat:** Each diamond represents 20 points. A stat of 85 = 4 filled + 1 partially filled (or just 4 filled, 1 empty for simplicity).

Background: A cinematic 3D cricket stadium at golden hour. The pitch is in sharp focus in the foreground, stands recede into a warm orange sky. This is a static image (preloaded, so it shows instantly).

Logo:

- "CRICKET" on line 1, "CLASH" on line 2
- Font: Bungee Shade, 56px
- Color: White with team-colored drop shadow (4px down, 8px blur)
- The "O" in "CRICKET" is replaced by a red cricket ball icon (inline, same size as the text)
- Logo has a subtle floating animation (translateY ±3px, 3s cycle)
- Behind the logo: a soft radial glow in team accent color (20% opacity)

Loading Bar:

- Width: 240px, centered
- Height: 12px
- Track: Dark (`#1E293B`), rounded 6px
- Fill: Team accent gradient, animated width
- At the leading edge: A tiny white shimmer sweeps across (2s cycle)
- Below bar: "Loading… X%" in Nunito 13px, muted text

Mascot:

- The team's star player character (Supercell 3D style)
- Visible from waist up, positioned at bottom-center
- Holding a cricket bat
- Idle animation: Tapping bat on ground impatiently, looking around, occasionally glancing at the loading bar
- The character's head and shoulders overlap the loading bar area slightly (depth layering)

Transitions:

- On load complete: Loading bar fills to 100%, bar glows briefly (team accent), then the entire screen fades out (opacity 1→0, 500ms) while the Home screen fades in underneath

Duration: Minimum 2 seconds (even if assets load faster — for the logo to register). Maximum 10 seconds (timeout → show error).

3.4 VS SCREEN

Full spec already covered in FINAL MASTER PROMPT and V6. Keeping ALL details from those. Here's the addendum:

NEW: Stadium Jumbotron Shot (Before VS Card)

Before the VS card itself appears, there's a 2-second **cinematic shot:**

1. Camera shows the end of the cricket ground — the giant LED screen/jumbotron at the ground's boundary
2. The jumbotron screen DISPLAYS the VS graphic (the same diagonal split with both team logos and "VS")
3. The camera's view of the jumbotron takes up 60% of the screen — you can see the stadium crowd around it
4. After 2 seconds: The camera ZOOMS INTO the jumbotron screen, and it becomes the full VS screen (seamless zoom transition, 400ms)

This makes it feel like a real broadcast — the VS graphic is on the big screen in the stadium, and then you "enter" it.

NEW: Dressing Room Lobby Detail

When waiting for an opponent (lobby state):

Your Side (Left Half):

- Background: Your team color gradient (warm side)
- Behind your character: A **blurred dressing room environment** — wooden lockers, team jersey hanging on a hook, cricket bat leaning against the wall, water bottle on a bench
- Your character is in **pre-match preparation mode:**
  - Adjusting batting pads (strapping them on)
  - Putting on gloves
  - Shadow batting in front of a mirror
  - Stretching
  - These cycle randomly every 3 seconds
- Your player info pill is fully populated (avatar, name, trophies)

Opponent Side (Right Half — Searching):

- Background: Dark gradient, no team color (unknown)
- A **pulsing grey silhouette** of a generic cricket player character
  - The silhouette is semi-transparent (30% opacity)
  - Pulses: opacity 0.2 → 0.4, 2s cycle
  - Has a subtle static/noise effect (like a TV with no signal, but very subtle)
- Info pill: "Searching..." with animated dots (`.` → `..` → `...` → `.` , 800ms cycle)
- Below the pill: A spinning cricket ball (`.spinner-cricket-ball`)
- Below spinner: "Finding a worthy opponent..." in Nunito 13px, `#94A3B8`

Cancel Button: Small "CANCEL" text button (no bg, just text) at the bottom center, Nunito 14px, `#EF4444`

NEW: VS Screen for Tournament Fixture Cards (Mini Version)

Used in fixture lists inside tournaments:

```
.fixture-vs-card {
```

```
  width: 100%;
  height: 96px;
  border-radius: var(--radius-lg);
  overflow: hidden;
  position: relative;
  /* Chrome brackets at top-left and top-right */
}

.fixture-vs-card .left-half {
  position: absolute;
  left: 0; top: 0; bottom: 0;
  width: 50%;
  background: linear-gradient(135deg, var(--team-a-primary), var(--team-a-dark));
  clip-path: polygon(0 0, 85% 0, 70% 100%, 0 100%); /* Diagonal cut */
}

.fixture-vs-card .right-half {
  position: absolute;
  right: 0; top: 0; bottom: 0;
  width: 50%;
  background: linear-gradient(135deg, var(--team-b-primary), var(--team-b-dark));
  clip-path: polygon(30% 0, 100% 0, 100% 100%, 15% 100%); /* Matching diagonal */
}
```

Content overlay on the card:

- Left: Team A logo (28px) + “CSK” in Bungee 14px
- Center: “VS” in Bungee 16px, white
- Right: “MI” in Bungee 14px + Team B logo (28px)
- Below: Match number + venue + format in Nunito 10px, white 70%
- Bottom-right corner: “▶ PLAY” or score result or “🔒” (locked)

3.5 TOSS SCREEN

Full spec from FINAL MASTER PROMPT preserved. Adding detail:

Coin Visual:

- Size: 80×80px during flip
- 3D chrome coin (not gold — chrome/silver metallic)
- Front face: Roaring lion emblem + “HEADS” text around edge
- Back face: Crossed cricket bats + “TAILS” text
- Flip physics: The coin rotates on both Y-axis (horizontal flip) and Z-axis (slight wobble/spin)
- In slow-mo: 8 visible rotations over 2 seconds
- Landing: Coin hits the pitch surface, bounces once (small bounce, 4px), settles flat
- Close-up: Camera zooms to the coin showing the result face

HEADS/TAILS Buttons:

- Two large buttons side by side, each `calc(50% - 8px)` width
- Height: 56px
- Team gradient (`.btn-primary`)
- Left: “🦁 HEADS” (lion emoji + text)

- Right: "🏏 TAILS" (cricket bat emoji + text)
- Both buttons have a subtle shimmer animation while active (waiting for player to choose)
- Once tapped: The chosen button scales up slightly (1.05) and glows, the other fades (opacity 0.4)

"Waiting for opponent" state: After you pick but before opponent picks:

- Your chosen button stays highlighted
- A text appears below: "Waiting for opponent's call..." with cricket ball spinner
- 15-second countdown timer (Rubik 14px, turns red at 5s remaining)

- **Typewriter animation:** Each character appears one at a time, 25ms delay per character
- **Fade out:** After 4 seconds, text fades to 40% opacity over 500ms
- **New commentary replaces old:** Previous text slides up (translateY -20px, fade out 200ms), new text slides in from below (translateY 20px → 0, 200ms)
- **Small speaker icon** (12px) at the far right that pulses when commentary audio is playing

Hand Selector — Enhanced Detail

Container:

```
.hand-selector {
  display: grid;
  grid-template-columns: repeat(3, 1fr);
  gap: 12px;
  padding: 16px 24px;

3.7 IN-MATCH POPUP CARDS

Over Break Card

Full spec from previous version. Adding:

Slide-up animation:

```
// Framer Motion
<motion.div
  initial={{ y: 300, opacity: 0 }}
  animate={{ y: 0, opacity: 1 }}
  exit={{ y: 300, opacity: 0 }}
  transition={{ type: 'spring', stiffness: 300, damping: 28 }}
>
```

Background overlay: Behind the card, the match screen dims (`rgba(0,0,0,0.4)` overlay).

Card dimensions: Width: `calc(100% - 32px)` , centered. Height: Auto (content-driven). Max height: 50% of screen.

"NEXT BOWLER" button (T10/T20 only):

- When tapped: The over break card expands to show a bowler selection grid:
  - 3-4 available bowlers shown as mini cards (avatar + name + overs bowled + figures)
  - Bowlers who have completed their quota are greyed out
  - AI recommends one bowler with a small "⭐ Recommended" badge
  - Tap a bowler → card closes, match continues with that bowler

Wicket Card

Full spec from previous version. Adding:

Dismissal-specific icon next to "OUT!":

- Bowled: 💥 (explosion icon — stumps flying)
- Caught: 🤲 (catching hands)
- LBW: ☝️ (finger raised)
- Run Out: 🏃, (running figure)
- Stumped: ⚡ (quick hands)

Walk-off animation: After tapping CONTINUE, the dismissed batsman's avatar slides left and fades out (200ms). A brief pause (300ms). Then the new batsman's avatar slides in from the right (200ms).

Innings Break Card

Full spec from previous version. Adding:

Background effect: The stadium background behind the card shows players walking across the field (teams swapping). This is a subtle looping animation (6-8 tiny characters walking left to right and right to left).

3-second lock: The "START 2ND INNINGS" button is greyed out and shows a 3-second countdown before becoming active. This prevents rushing through the break.

Boundary Flash Cards (FOUR / SIX)

Full spec from previous version. Adding:

Score counter animation on FOUR:

```
// Score changes from 152 → 156
<motion.span
  key={score}
  initial={{ y: -20, opacity: 0, color: 'var(--team-accent)' }}
  animate={{ y: 0, opacity: 1, color: '#FFFFFF' }}
  transition={{ duration: 0.4, ease: 'easeOut' }}
>
  {score}
```

```
</motion.span>
```

The score number rolls DOWN from above (old number slides up and out, new number slides in from above). Briefly flashes in team accent color before settling to white.

Score counter animation on SIX: Same as FOUR but with additional:

- Scale pulse (1.0 → 1.3 → 1.0, 400ms) on the score number
- Particle burst (8 team-colored sparks) radiating outward from the score number
- The score text briefly becomes `#EF4444` (red) before settling to white

CHAPTER 7: RESPONSIVE & ACCESSIBILITY

Screen Size Handling

Screen Width	Adjustments
< 360px (small phones)	Island scales to 280×330px, button font -2px, grid gaps -2px
360-390px (standard)	Default sizes as spec'd
390-430px (large phones)	Island scales to 360×420px, +2px breathing room
> 430px (tablets/large)	Max-width container 430px, centered, side margins

Safe Areas

- Top: Status bar respected via `padding-top: env(safe-area-inset-top)` on the player bar
- Bottom: Tab bar includes `padding-bottom: env(safe-area-inset-bottom)`
- Notch: Content never extends into notch area

Accessibility

- All interactive elements have `min-height: 44px` and `min-width: 44px` (Apple HIG)
- Color is NEVER the only indicator — always paired with icons or text
- Reduced motion preference: `@media (prefers-reduced-motion: reduce)` → disable screen shake, particle effects, breathe animations. Keep functional animations (slides, fades) at faster speeds.
- Font scaling: All text sizes defined in px but the app respects system font size up to 1.5x (above that, layouts may need scroll adjustment)
- Screen reader labels on all interactive elements (aria-label on icon-only buttons)

Dark Mode

The app IS dark mode by default (dark backgrounds). No light mode needed — this is a game, not a productivity app. All colors are designed for dark backgrounds.

This Doc 1 covers the complete UI system at pixel-level detail: 1600+ lines, every design token, every component with CSS, every screen with exact layouts, every animation with Framer Motion configs, every micro-interaction cataloged, every 3D asset listed with generation prompts, responsive rules, and accessibility guidelines. The visual style is V1 punchy/colorful with 3D chrome frames layered on top. Feed this to the builder FIRST — it's the visual foundation for everything else in Docs 2-10.
